

****REPRESENTATIVE DATASHEET******Sheep anti-Factor XIII Subunit A (FXIII-A)**

Whole IgG from antiserum

10 mg

Product #: SAF13A-IG**Lot #:** XXXX**Expiry date:** XXXX

Store at -10 to -20°C

1348 Sandhill Drive, Ancaster, Ontario, Canada L9G 4V5
905-304-9896 • 800-903-6020 • fax 905-304-9897

For Research Use Only.

Not for use in diagnostic procedures.

Description of Factor XIII (FXIII)

Factor XIII (FXIII, fibrin stabilizing factor) is the proenzyme form of a transamidase that is essential for normal haemostasis and fibrinolysis, wound healing, female fertility and foetal development. Extracellular FXIII consists of A subunits (83 kDa each) which contain the enzyme moiety, and B subunits (76 kDa each) which act as a carrier protein for the A subunit in circulation. Both subunits are produced under separate genetic control. In plasma, FXIII exists as a non-covalent tetrameric complex (320 kDa) of two A-subunits and two B-subunits (A₂B₂). The concentration of FXIII tetramer in plasma is ~25 µg/ml (~80 nM). An intracellular form of FXIII is found in platelets, megakaryocytes and monocytes. This form of FXIII presents as a dimer of two A-subunits only and has a molecular weight of 160 kDa. The importance of these intracellular stores is demonstrated by the observation that platelets can contribute up to half of the FXIII activity in platelet rich plasma. The activation of FXIII involves several steps. Thrombin cleaves after Arg³⁷ of each A-subunit in the A₂B₂ tetramer, releasing a 4.5 kDa activation peptide. Additional conformational changes induced by the binding of calcium, and by dissociation of the B-subunits from the A-subunit dimer are required to obtain full enzyme activity. FXIIIa is a cysteine protease that catalyses the formation of γ-glutamyl-ε-lysyl bonds between the γ and α chains of polymerised fibrin molecules. Other proteins found crosslinked into fibrin clots by FXIIIa include fibrinogen, α₂antiplasmin, fibronectin, vitronectin and von Willebrand factor¹⁻³.

Product Specifications**Description:**

Vial containing XXXX ml of whole IgG representing approximately 1 ml of antiserum. Total protein is 10 mg.

Format:

Whole IgG, clear liquid.

Host Animal:

Sheep

Immunogen:Human Factor XIII Subunit A (A₂) purified from plasma.**Concentration:**IgG concentration is XXXX mg/ml, determined by absorbance using an extinction coefficient (E^{1%₂₈₀}) of 13.4.**Buffer:**

10 mM HEPES, pH 7.4, 150 mM NaCl, 50% (v/v) glycerol.

Storage:

Store between -10 and -20°C. Product will become viscous but will not freeze. Avoid storage in frost-free freezers. Keep vial tightly capped. Allow product to warm to room temperature and gently mix before use.

Specificity:

This antibody is specific for Factor XIII subunit A as demonstrated by immunoelectrophoresis and ELISA.

Applications:

Suitable as a source of antibodies to Factor XIII subunit A.

Neutralizing activity:

Not determined.

Species Cross Reactivity:

Not determined.
