

PE-iFluor™ 610 TandemCatalog number: 2700
Unit size: 1 mg**Product Details**

Storage Conditions	Refrigerated (2-8 °C), Minimize light exposure
Expiration Date	6 months upon receiving

Chemical Properties

Appearance	Solid
Soluble In	Water

Applications

PE-iFluor™ 610 Tandem is a new color used in flow cytometry. Its primary absorption peak is at 565 nm with emission peak at ~630 nm. It has been validated with a spectral flow cytometer. PE-iFluor™ 610 Tandem gives a significantly distinct color compared to the commonly used PE-Texas Red Tandem. AAT Bioquest offer the largest number of colors for conventional and spectral flow cytometry applications, including iFluor™, mFluor™ small organic dyes and a variety of their tandems.
